Medical Simulation Laboratory

Laboratory of Medical Simulations in Suwalki is a modern training centre where medical staff and everyone who is interested can study about medical rescue.

Centre exactly copies hospital and preclinical terms. Laboratory is equipped in the most modern apparatus which enables to make a simulation in clinical real terms.

Thanks for simulators there is a possibility of performance every critical situation which threaten for life of real patient in hospital. Training in such a modern place is a perfect opportunity to contact with new achievements in the medical simulation.

Additionally for medical staff our Centre give opportunity of raising qualifications without stress about health of patient because medical simulation is a perfect way purchasing the knowledge and improving ability without expose living persons to risk.

In our Laboratory everyone can feel and understand for a moment what problems accompanying in medical action and feel as a doctor, nurse, paramedic or ambulance driver. The most importantly is that everyone can learn how effectively give first aid for injured person in different situations in lives, even the most surprising

Since march 2014 the Centre of Medical Simulation is equipped in simulator of ambulance which is only in Europe. So far in our country it wasn't this type of trainings for drivers and staff of emergency vehicles. It is perfect way to safe raising skills in every traffic weather with possibility of arranging sudden accidents which can happen during ride.

The cockpit and medical range were put on so-called platforms of Stewart on which rely simulators. Their software guarantee moving of both parts of simulator in this way as how most faithfully copy real experiences during movement of vehicle at driver and medical team.

Additional effects provide a system of visualisation for conditions on road. The programme has various parameters of route, e.g.: rain, fog, blizzard, strong wind, icing, ride in the city along roadless tracts or mountain areas. Everything is so real that rescue team and patient will certainly sense bump of vehicle in kerb or irregularities on road.

Learn, new experiences and sometimes fun - everything in one place and everything for know, how to save health and life.
